COMPANY OVERVIEW

Our vision is to give everyone the same experience when they communicate at sea as on land

BUSINESS AREAS

Network

- Land based network
- High Speed (up to 400 Mbits)
- Low latency

Port Connectivity

- High Speed (up 1 Gbits)
- Low latency
- For Cruise ships and Freight ships

On Board Services

Traffic shaping

- Prioritize different types of traffic
- Mix in other access networks
- Control what is delivered and how

Possibility to monetize

- Vouchers or credit card payment

Marketing through portal Customers Surveys

MAIN BUSINESS FOCUS

Network

We deliver internet and connectivity to the maritime industry through the world's largest land based network, which we own and operate via our inhouse developed and manufactured solution

Nowhere Networks is a world leader, a fast-growing high-tech company that develops its own cost-effective internet broadband solution for the maritime industry.

We build a network for high-speed internet in the world and today we own and operate the largest network in the world in our segment, radio-based broadband for the maritime industry based on land. The business concept is to provide internet connectivity with higher speed and higher quality to the maritime industry, at a significantly lower cost compared to other systems and solutions in the market. Vessels are always connected via a land-based radio communication solution with built-in antenna tracking technology that automatically communicates wireless signal from ship to land. The intelligent cloud-based software platform can scale to over 10,000 vessels, it enables automated control and automatic resource optimization. We are a Swedish company based in Stockholm.
